SUMMARY

Data Scientist with experience building and deploying machine learning models in logistics, fintech, and healthcare. Currently at FedEx working on demand forecasting, NLP/LLM applications, and ML pipelines on AWS. MS in Data Science (University of Memphis, 2025). Comfortable owning the full lifecycle: feature engineering, modeling, deployment, and monitoring.

WORK EXPERIENCE

FedEx Corporation | Data Scientist / ML Engineer

Jun 2024 – Present

Memphis, TN

- Built package demand forecasting models (XGBoost, LightGBM, Prophet) on AWS SageMaker, improving volume prediction accuracy by 31% over the prior baseline and supporting hub capacity planning.
- Developed a customer complaint classification and routing system using a fine-tuned BERT model and a LangChain RAG pipeline over internal knowledge bases, reducing escalation handling time.
- Automated model retraining and versioning with SageMaker Pipelines and AWS Feature Store, using drift signals from Evidently AI to trigger retraining.
- Served real-time delivery-delay risk scores via AWS Lambda and SageMaker endpoints (50K+ daily predictions at sub-60ms latency), consumed by dispatch operations for rerouting decisions.
- Designed A/B tests and uplift analyses to evaluate customer self-service features; results informed rollout decisions.
- Built Tableau and Power BI dashboards tracking model and delivery KPIs for operations and leadership; identified ~\$18K/year in AWS cost savings.

Caliber Home Loans | Data Scientist, Analytics & Risk Modeling

May 2021 – Jul 2023

India (remote support for US mortgage operations)

- Built prepayment-risk and delinquency models using XGBoost and survival analysis on behavioral and macroeconomic features to support lending and servicing decisions.
- Developed ETL/ELT pipelines in Snowflake consolidating origination, servicing, and underwriting data for modeling and regulatory reporting.
- Automated amortization modeling and loan-schedule generation in Python, substantially reducing manual errors and processing time.
- Implemented Great Expectations data-quality checks for ML training and reporting datasets; optimized Snowflake queries and warehouse configuration, saving ~\$50K annually.
- Delivered Power BI dashboards with delinquency, repayment, and refinancing KPIs used by senior stakeholders.

Novartis | Data Scientist, Healthcare Analytics

Jan 2020 – Apr 2021

India

- Built patient no-show prediction models (XGBoost, logistic regression) using behavioral, demographic, and geospatial data; engineered temporal and weather features that improved model performance by ~20%.
- Deployed a real-time scoring API (10K+ daily predictions) with SHAP-based explanations to support scheduling decisions.
- Partnered with clinical operations teams to turn model outputs into scheduling changes and better capacity utilization.

SKILLS

Languages: Python (pandas, NumPy, scikit-learn), SQL, R

ML / AI: XGBoost, LightGBM, PyTorch, TensorFlow, Hugging Face Transformers, LangChain, RAG, SHAP

Cloud & MLOps: AWS (SageMaker, Glue, Lambda, S3), MLflow, Airflow, Docker, GitHub Actions, Evidently AI

Data: Snowflake, PostgreSQL, Kafka, dbt, Great Expectations

Analytics: A/B testing, causal inference, Tableau, Power BI

EDUCATION

University of Memphis

Aug 2023 – May 2025

Master of Science, Data Science, Memphis, TN

CERTIFICATIONS

- Microsoft Certified: Power BI Data Analyst Associate
- Mathematics for Machine Learning & Data Science (DeepLearning.AI)
